DETAILED ACTION

(1). Applicant's Amended Specification, Amendments and Remarks filed on 03/20/2009 have been received.

Claims 18-20 are cancelled. Total cancelled claims are 16-20.

The 112 1st paragraph rejection of claims 18-20 in prior Office Action dated 2/27/2009 is withdrawn.

Allowable Subject Matter

(2). **Claims 1-15** are allowed.

Reasons for Allowance

(3). The following is an examiner's statement of reasons for allowance:

This instant Application is allowable because Applicant's spray means to consume substantially entire amount of water in the formation of water films on the inner circumferential surface of main body and on outer circumferential surface of partition wall, thereby wetting the inner circumferential surface and the other circumferential surface 360 degrees around in dust collector (instant claim 1) overcome the closest prior arts of records as per said prior art does not anticipate nor render obvious to the feature as claimed.

Closest prior art Wisting (US 3989488) discloses multi-stage air scrubbing unit (Title) as shown in the following Figure. The motion of water throughout the chamber is such that a certain percentage of it will impinge on the inner surface 35 of the scrubber tank 2 and on the outer surface 38 of outlet tube 10. These surfaces will remain wet throughout all of the stages of operation of the scrubber. By remaining wet, this provides an additional basis for removal of contamination in the air (Col. 4, line 23-30). Wisting (US 3989488) does not teach spraying water directly onto the inner circumferential surface of the body and outer circumferential surface of partition wall in the scrubber.

U.S. Patent Nov. 2, 1976 Sheet 1 of 3 3,989,488

Pircon (US 412670) discloses pollution control apparatus and method (Title). Apparatus operating at low pressure drop and low initial velocity for removing pollutants down to submicron sizes from gas streams comprising a nozzle means accelerating the gas flow to about four times its entering velocity into a large expansion chamber having impinger area for removal of pollutant (Abstract, line 1-6). It is further illustrated in the Figure below.

Although Pircon (US 4120670) teaches the spray of entire water, the prior art Wisting (US 3989488) teach certain percentage of water is used for an additional basis for removal of contamination in the air and in combining, the teaching of Pircon (US 4120670) is against the teaching of primary reference Wisting (US 3989488). It is concluded that instant claims 1-15 are considered patentable subject matter and passed to issue as of the date this Allowability Notice.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
